

## TABLE OF CONTENTS

### PREFACE

- 0.1 About the Textbook
- 0.2 How to Study with the Text
- 0.3 How to Study Organic Chemistry

### CHAPTER 1. INTRODUCTION TO ORGANIC CHEMISTRY AND DRAWING MOLECULES

- 1.1 WHAT IS ORGANIC CHEMISTRY?
- 1.2 BOND-LINE STRUCTURES: ELECTRONS, BONDS, AND FORMAL CHARGES
  - 1.2.1 Formal Charge
- 1.3 DEGREES OF UNSATURATION (DU)
  - 1.3.1 Using DU for Molecules with Other Atoms
- 1.4 RESONANCE AND ELECTRON PUSHING
  - 1.4.1 Moving Electrons without Violating Rules
  - 1.4.2 Estimating the Relative Importance of Contributing Resonance Structures
- 1.5 X-RAY CRYSTALLOGRAPHY: FINDING POSITIONS OF ATOMS
  - 1.5.1 Why X-Rays?
  - 1.5.2 The Spatially Periodic Crystalline State
  - 1.5.3 How It's Done

### CHAPTER 2. MOLECULAR STRUCTURE - THE $\sigma$ BOND

- 2.1 ATOMIC ORBITALS (AOs)
- 2.2 MOLECULAR ORBITALS (MOs)
  - 2.2.1 H Atoms to Diatomic H<sub>2</sub>
  - 2.2.2 AOs and MOs Define Atomic and Molecular Size
  - 2.2.3 MO Energy Diagrams
  - 2.2.4 Minimalist Summary of Bond Formation
- 2.3 HYBRIDIZATION OF AOs TO DETERMINE MOLECULAR SHAPE
  - 2.3.1 Note to the Reader Regarding Sections 2.3, 2.6-2.8
  - 2.3.2 Methane: The Simplest Stable Hydrocarbon
  - 2.3.3 Hybridized Carbon AO Model for CH<sub>4</sub>
  - 2.3.4 Shape of Hybrid Carbon Carbon sp<sup>3</sup> AOs

- 2.3.5 Directionality of Hybrid MOs
- 2.3.6 Hybrid Carbon AOs + Hydrogen AOs --> CH<sub>4</sub> MOs
- 2.3.7 Group sp<sup>3</sup> Orbitals
- 2.4 PES: Evidence for CH<sub>4</sub> MOs
- 2.5 CH<sub>4</sub> ON THE MOVE
- 2.6 STRUCTURE OF THE METHYL ANION
  - 2.6.1 MO Energy Diagram of the Methyl Anion
  - 2.6.2 MOs of the Methyl Anion
- 2.7 STRUCTURE OF THE METHYL CATION
  - 2.7.1 Directionality of Hybrid Carbon sp<sup>2</sup> AOs
- 2.8 STRUCTURE OF THE METHYL RADICAL
  - 2.8.1 The Improper Dihedral Angle

### CHAPTER 3. MOLECULAR STRUCTURE – UNDERSTANDING $\sigma$ and $\pi$ BONDING

- 3.1 ATOMIC ORBITALS (AOs)
  - 3.1.1 The Bond in Ethane Rotates
  - 3.1.2 Molecules with Rotatable Bonds Related to Ethane
  - 3.1.3 Naming Alkanes
- 3.2 STRUCTURE OF ETHYLENE: THE NON-ROTATABLE  $\pi$  BOND
  - 3.2.1 Molecules with  $\pi$  Bonds Related to Ethylene
  - 3.2.2 Name Alkenes
- 3.3 PARALLEL MO INTERACTIONS IN GENERAL
  - 3.3.1 Resonance Structures Involving Double Bonds
- 3.4 STRUCTURE OF ACETYLENE
  - 3.4.1 MOs of Acetylene
  - 3.4.2 Molecules with  $\pi$  Bonds Related to Acetylene
- 3.5 CHEMISTRY AND BONDS
- 3.6 THE ALLYLIC ORBITAL SYSTEM
  - 3.6.1 The Allyl Cation
  - 3.6.2 The Allyl Anion
  - 3.6.3 The Allyl Radical

- 3.6.4 Allylic MOs in Many Organic Molecules
- 3.7 BUTADIENE AND CONJUGATED  $\pi$  BONDS
  - 3.7.1 Shortcut to Building Conjugated  $\pi$  MOs
- 3.8 LOCAL NATURE OF  $\sigma$  AND THE GLOBAL NATURE OF  $\pi$ 
  - 3.8.1 Saturation Truncates Conjugated Systems
- 3.9 BOND AND ORBITAL HYBRIDIZATION UPON INSPECTION
- 3.10 INDUCTION, POLAR COVALENT BONDS, AND ELECTRONEGATIVITY
  - 3.10.1 Dipole Moments and Molecular Polarity
  - 3.10.2 The Magnitude of the Debye Unit
- 3.11 INTERMOLECULAR FORCES AND PHYSICAL PROPERTIES
  - 3.11.1 Dispersion Forces
  - 3.11.2 Dipole-Dipole Interactions
  - 3.11.3 Hydrogen Bonding Interactions
- 3.12 UV-VIS SPECTROSCOPY – A MINIMAL INTRODUCTION
- 3.13 ANALYTICAL UV-VISIBLE SPECTRA AND MO CONJUGATION
  - 3.13.1 The Electronic Transition
  - 3.13.2 Protecting Yourself from Sunburn
  - 3.13.3 Looking at UV-vis Spectra
  - 3.13.4 Organic and Biological Analytical UV Spectroscopy

## CHAPTER 4. ISOMERS

- 4.1 INTRODUCTION: SOURCES AND USES OF ALKANES
- 4.2 NOMENCLATURE
  - 4.2.1 Naming Functional Groups
  - 4.2.2 IUPAC Nomenclature
  - 4.2.3 Molecules with Substituents Other than Carbon
  - 4.2.4 Cyclic Molecules
  - 4.2.5 Bicyclic Molecules
- 4.3 INFRARED SPECTROSCOPY
  - 4.3.1 IR Spectra: Absorption Intensity
  - 4.3.2 IR Spectra: Absorption Frequency

4.3.3 IR Spectra: Bond Strength

4.3.4 IR Spectra: Atomic Mass

4.3.5 IR Spectra: Absorption Band Width

4.3.6 IR Spectra: Coupled Frequencies

4.3.7 IR Spectra: Functional Group Identification

#### 4.4 ISOMERS

4.4.1 Stereoisomers / Enantiomers

4.4.2 Meso Compounds: Those that Posses an Internal Mirror of Symmetry

#### 4.5 CHIRALITY AND NATURAL PRODUCTS

4.5.1 R/S Configuration

#### 4.6 CHIRAL COMPOUNDS THAT LACK A CHIRAL CENTER

#### 4.7 OPTICAL ACTIVITY

4.7.1 Optical Purity

#### 4.8 MULTIPLE CHIRAL ELEMENTS / DIASTEREOMERS

#### 4.9 RESOLUTION OF ENANTIOMERS

4.9.1 Asymmetric Crystallization

4.9.2 Derivatization

4.9.3 Chromatography

4.9.4 Enzymatic Resolution

#### 4.10 REVIEW OF STEREOISOMERS

### CHAPTER 5. CHEMICAL REACTIVITY AND MECHANISMS

#### 5.1 INTRODUCTION TO CHEMICAL THERMODYNAMICS

#### 5.2 REACTION ENTHALPY ( $\Delta H_{\text{rxn}}$ )

#### 5.3 REACTION ENTROPY

5.3.1 Entropy in Calorimetry

5.3.2 Changes in Chemical Entropy ( $\Delta S_{\text{rxn}}$ )

5.3.3 Universal Aspect of Entropy

#### 5.4 GIBBS FREE ENERGY ( $\Delta G_{\text{rxn}}$ ) FOR CHEMICAL EQUILIBRIA

5.4.1  $\Delta G_{\text{rxn}}$  is a Difference in Entropy

5.4.2 Thermodynamic Parameters for Spontaneous Chemistry

5.4.3 Using  $\Delta H$  of Chemical Bonds

5.5 EQUILIBRIA

5.5.1  $\Delta G_{\text{rxn}} = -RT \ln K_{\text{eq}}$

5.6 KINETICS

5.6.1  $\Delta G^\ddagger$  is Not a State Function!

5.6.2 Molecular Features that Affect Reaction Rates

5.7 INTRODUCING ENERGY DIAGRAMS

5.7.1 Kinetic vs. Thermodynamic Products

5.8 READING ENERGY DIAGRAMS

5.9 CATALYSIS

5.10 USING  $pK_a$  TO PREDICT HETEROLYTIC BOND FORMATION

5.10.1  $pK_a$  is an Energy Unit

5.11 NUCLEOPHILES AND ELECTROPHILES

5.12 MECHANISMS AND ARROW PUSHING

5.13 ARROW PUSHING IN SPECIFIC REACTIONS

5.13.1 Heterolytic Bond Cleavage

5.13.2 Homolytic Bond Cleavage

5.13.3 Using Arrow Pushing in Mechanisms

**CHAPTER 6. MOLECULAR CONFORMATION**

6.1 INTRODUCTION TO MOLECULAR DYNAMICS

6.2 CONFORMATIONS OF OPEN-CHAIN NEWMAN PROJECTIONS

6.3 CONFORMATION IN CYCLIC MOLECULES

6.3.1 Conformation in Cyclohexanes

6.3.2 Drawing Cyclohexane Conformers

6.3.3 Axial / Equatorial vs. Cis / Trans

6.3.4 Chair Conformations

6.4 CYCLOHEXANE CONFORMATIONAL ENERGY

6.4.1 Relative Energies of Substituted Cyclohexanes

6.5 CHAIR CONFORMATIONS IN CYCLIC CARBOHYDRATES

6.6 CHAIR CONFORMATIONS IN SATURATED POLYCYCLIC STRUCTURES

## 6.7 NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY

- 6.7.1 Chemical Shifts in NMR
- 6.7.2 Chemical Shifts and Residual  $^1\text{H}$  in NMR Solvents
- 6.7.3 NMR Time Scale
- 6.7.4 NMR and Molecular Symmetry
- 6.7.5 NMR Integration and the Beer-Lambert Law
- 6.7.6 J-Coupling in NMR
- 6.7.7 Stepwise Analysis of First Order  $^1\text{H}$  NMR Coupling
- 6.7.8 Protic  $^1\text{H}$  NMR Chemical Shifts and Dynamic States
- 6.7.9 The NMR Time Scale
- 6.7.10 A Few More Notes about NMR Spectroscopy

## 6.8 $^{13}\text{C}$ NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY

- 6.8.1 Chemical Shifts in  $^{13}\text{C}$  NMR

## CHAPTER 7. ONE-ELECTRON TRANSFER: RADICAL REACTIONS

### 7.1 INTRODUCTION TO RADICALS

- 7.1.1 Radical Mechanisms

### 7.2 RADICAL STABILITY

### 7.3 CHLORINATION OF ETHANE

### 7.4 THERMODYNAMICS OF HALOGENATION

### 7.5 SELECTIVITY OF HALOGENATION

- 7.5.1 Hammond's Postulate
- 7.5.2 Hammond's Postulate in Selectivity of Halogenation

### 7.6 STEREOCHEMISTRY OF HALOGENATION

### 7.7 ALLYLIC / BENZYLIC BROMINATION

### 7.8 ATMOSPHERIC CHEMISTRY AND THE OZONE LAYER

### 7.9 THE ORGANIC OXIDATION STATE

- 7.9.1 Addition of Water or HX is Neither Oxidation Nor Reduction

### 7.10 AUTOOXIDATION

### 7.11 RADICAL ADDITION OF HBr

- 7.11.1 Mechanism of Radical Addition to a C-C Pi Bond

7.11.2 Reaction Conditions for Radical Addition of HBr

7.12 DISSOLVING METAL REDUCTION OF ALKYNES

7.13 BIRCH REDUCTION

7.14 RADICAL POLYMERIZATION

7.14.1 Overview of a Radical Chain-Growth Polymerization Reaction

7.14.2 Initiation

7.14.3 Propagation

7.14.4 Termination

7.14.5 Kinetics

## CHAPTER 8. ACIDS AND BASES

8.1 INTRODUCTION TO ACIDS AND BASES

8.2 BRØNSTED-LOWRY ACIDS AND BASES

8.2.1 Lewis Acids and Bases

8.2.2 Curved Arrow Notation

8.3 ACIDITY

8.3.1 Qualitative Perspective

8.3.2 Quantitative Perspective

8.4 POSITION OF EQUILIBRIUM

8.5 BIOLOGICAL RELEVANCE

## CHAPTER 9. SUBSTITUTION AND ELIMINATION REACTIONS

9.1 INTRODUCTION

9.2 KINETICS AND MECHANISMS

9.3 SUBSTITUTION REACTION MECHANISMS

9.3.1 Bimolecular Substitution Reactions:  $S_N2$

9.3.2 Unimolecular Substitution Reactions:  $S_N1$

9.4 NUCLEOPHILES

9.4.1 What is a Nucleophile?

9.4.2 Protonation State

9.4.3 Periodic Trends in Nucleophilicity

9.4.4 Resonance Effects on Nucleophilicity

9.4.5 Steric Effects on Nucleophilicity

9.5 ELECTROPHILES AND CARBOCATION STABILITY

9.5.1 Steric Hindrance at the Electrophile

9.5.2 Carbocation Stability

9.6 LEAVING GROUPS

9.7 REGIOCHEMISTRY OF  $S_N1$  REACTIONS WITH ALLYLIC ELECTROPHILES

9.8  $S_N1$  or  $S_N2$ ? PREDICTING THE MECHANISM

9.9 BIOLOGICAL NUCLEOPHILIC SUBSTITUTION REACTIONS

9.9.1 A Biochemical  $S_N2$  Reaction

9.9.2 A Biochemical  $S_N1$  Reaction

9.9.2 A Biochemical  $S_N1/2$  Hybrid Reaction

9.10 NUCLEOPHILIC SUBSTITUTION IN THE ORGANIC SYNTHESIS LABORATORY

9.10.1 Williamson Ether Synthesis

9.10.2 Turning a Poor Leaving into a Good One: Tosylates

9.11 SUMMARY

## CHAPTER 10. ELIMINATION REACTIONS

10.1 INTRODUCTION

10.2 UNIMOLECULAR ELIMINATION REACTION MECHANISM: E1

10.2.1 Overview of the E1 Mechanism

10.2.2 Regiochemistry of E1 Elimination

10.2.3 Stereochemistry of E1 Elimination

10.4 BIMOLECULAR ELIMINATION REACTION MECHANISM: E2

10.4.1 Overview of the E2 Mechanism

10.4.2 Regiochemistry of E2 Elimination

10.4.3 Stereochemistry of E2 Elimination

10.5 COMPETITION BETWEEN ELIMINATION AND SUBSTITUTION REACTIONS

10.6 BIOCHEMICAL E1 ELIMINATION REACTIONS

10.7 SUMMARY
